

# Antique & Ice Finish

*Innovation by ...*

**Antique block** - Antique Finish has stone particles slightly raised from the background matrix, creating a weathered finish. Available in all standard sizes, colours, as well as our large format units.

**Ice Block** - Ice Finish is similar to the “Antique Finish”. Ice has an enhanced weathered finish that has been polished. Available in all standard sizes, colours, as well as our large format block.

**Maintenance Free:** Antique & Ice units are virtually maintenance free.

**Low Life-Cycle Costs:** The Autoclaved or low pressure cured units will last the sustainable life of your building.

**Easy-to-Clean:** Antique & Ice units can be cleaned with a variety of masonry cleaners. Contact Day & Campbell Limited to find an approved cleaner.

**Sealer:** Faceal Oleo HD is the only sealer recommended for our products. The sealer performs in a few different ways, but ultimately everything that it does leads to protection and preservation of your assets value. It is an invisible nanotechnology sealer, meaning that you cannot tell that it has been applied. It is virtually invisible. It does not change the water vapour diffusion characteristics of the substrate (so it remains breathable). It serves as protection against graffiti, water, oil and grease-based contamination. It also helps facilitate the cleaning of and removal of

chewing gum, ice and algae. It is also very resistant to mechanical abrasion further protecting the finish. Faceal Oleo HD has very good self-cleaning characteristics for exterior or shower applications. The pollution cannot penetrate the surface so the rain or shower water washes the debris away. Faceal Oleo HD is non-reversible and constitutes a so-called permanent graffiti/pollution protection system. It comes with a 10 year warranty. Contact us for more information.

**Mould and Moisture Resistant:** In typical use, masonry construction prevents growth of toxic mould because: (a) masonry materials do not provide a needed source of food; and (b) masonry wall systems offer defined water management strategies that effectively (i) resist the penetration of moisture both from the interior and exterior, (ii) minimize accumulation and duration of exposure of materials to moisture, and (iii) facilitate drying. A Canadian research study completed in 2003 showed definitively that wood and gypsum board products are sources of mould: “Under identical conditions

conductive to the growth of fungal mould, no mould is produced on clay brick, concrete block and concrete, whereas substrates made of wood and paper products produced measurable amounts."

**Durability:** Structural integrity and durability make Antique & Ice masonry units the perfect choice for your residential, institutional, commercial or industrial project.

**Fire Protection:** Concrete masonry is a non-combustible material, effectively resisting the passage of flames, smoke, and heat through its mass.

Accordingly, building codes assign high fire ratings to concrete masonry walls, making them superior firewalls for hotels, retirement homes, apartments and other structures. These same attributes make concrete masonry desirable for foundation walls and basements to safeguard against the spread of fires and to support the structure above without degradation under extreme heat.

**Over-sized Units:** Units are available in large format sizes.

**Applications:** Interior and exterior.
