

Modern Masonry Architectural Line (MMAL)

Split Face

Innovation by ...

Day & Campbell
Limited
Rich in history ... building for the future

Rugged and heavily textured, Split Face Masonry is like rustic stone. Its surface is rock-like, yet its edges and corners are precise resulting in a subtle form of architectural expression.

Split face masonry units are integrally coloured pre-finished architectural concrete blocks with a beautiful, rough texture on one or more faces of the unit.

Split face units also feature the same cost-saving, one-step installation as Day & Campbell Ltd.'s other lines of pre-finished units. Split face units are available in any colour and in a wide variety of shapes and sizes.

One-Step Installation: Split face masonry units provide finished load-bearing or non-load-bearing walls in a single trade, one-step operation. You save time and money.

Low Life-Cycle Costs: Split face will last the sustainable lifetime of your building.

Mould and Moisture Resistant: In typical use, masonry construction prevents growth of toxic mould because: (a) masonry materials do not provide a needed source of food; and (b) masonry wall systems offer defined water management strategies that effectively (i) resist the penetration of moisture both from the interior and exterior, (ii) minimize accumulation and duration of exposure of materials to moisture, and (iii) facilitate drying.

A Canadian research study completed in 2003 showed definitively that wood and gypsum board products are sources of mould: "Under identical conditions conducive to the growth of fungal mould, no mould is produced on clay brick, concrete block and concrete, whereas substrates made of wood and paper products produced measurable amounts."

Sealer: Faceal Oleo HD is the only sealer recommended for our products. The sealer performs in a few different ways, but ultimately everything that it does leads to protection and preservation of your assets value. It is an invisible nanotechnology sealer, meaning that you cannot tell that it has been applied. It is virtually invisible. It does not change the water vapour diffusion characteristics of the substrate (so it remains breathable). It serves as protection against graffiti, water, oil and grease-based contamination. It also helps facilitate the cleaning of and removal of chewing gum, ice and algae. It is also very resistant to mechanical abrasion further protecting the finish. Faceal Oleo HD has very good self-cleaning characteristics for exterior or shower applications. The pollution cannot penetrate the surface so the rain or shower water washes the debris away. Faceal Oleo HD is non-reversible and constitutes a so-called permanent graffiti/pollution protection system. It comes with a 10 year warranty. Contact us for more information.

Durability: Structural integrity and durability make Split face the perfect choice for your institutional, commercial or industrial project.

Fire Protection: Depending on the thickness and internal configuration of the block, Split face offers up to a 4-hour fire rating.

Design Flexibility: Split face masonry units offer you freedom of expression in design through a wide variety of colours, shapes and ribbed patterns.

Applications: Interior and exterior

Day & Campbell Modern Masonry Split Face Stone Colour Options ...

Concrete #000

Cameo White #200

Super White #201

Antique Sterling #303

Escarpment Grey #304

Charcoal #305
